

## The Mathematics Department

The Mathematics Department is taught in four well-equipped rooms in the Redstone building, and in the seminar rooms in the new Sixth Form Centre. It enjoys a welcoming and stimulating learning environment made more so by its hugely enthusiastic staff members.

The vacancy is created by the retirement of two senior part time mathematics teachers. The successful candidate will join an exceptionally strong team of good mathematicians and will encourage the enjoyment of, and the desire for, greater understanding of mathematics in able students.

The successful candidate will be expected to teach across all year groups from 7 to 13.

A genuine love of mathematics and how it has developed over the years is the greatest factor in encouraging able students to wish to further their knowledge and understanding to the highest levels

Approaches to teaching are well structured and it would be expected that the appointee is keen to work within the framework of the latest departmental policies and initiatives whilst also bringing their own strengths to the position.

The profile and reputation of mathematics is very strong, with excellent results both in formal examinations, and national mathematics Olympiads. The department enjoys excellent support from the Senior Management Team.
